

WENGE

Millettia Laurentii

Our Wenge is harvested in Central Africa and is commonly used in Millwork products such as paneling, furniture, turned objects, and musical instruments. It is very durable and has good termite resistance. Wenge's heartwood is medium brown, sometimes with a reddish or yellowish hue, with nearly black streaks. With the application of a wood finish, the wood can become nearly black.

Appearance & Grain

*Uniform Medium Reddish or Yellow Brown, Black Streaks.
Straight Grain, Coarse Texture, Natural Luster.*

Fun Fact:

After Wenge has been finished it develops into a very dark brown and can even be substituted for ebony.
