

CUMARU

Dipteryx odorata

Cumaru, grown in northern South America, is known as a strong, hard, and very attractive wood species, with medium to dark brown coloring, sometimes with streaks of yellow or green brown. It has an interlocked grain and medium texture, and excellent durability and weathering properties, making it very durable to decay. Cumaru is a beautiful and long-lasting lumber for outdoor projects like decks, boardwalks, and exterior siding.

Appearance & Grain

*Medium to Dark Brown, Reddish Purple Hue, Yellowish Streaks.
Interlocked Grain, Medium Texture.*

Fun Fact:

The tree from which Cumaru comes from is often cultivated for its vanilla cinnamon scented seeds, the tonka bean.
